SUMMARY

Software engineer with production experience in React, React Native, TypeScript, and REST APIs, returning to full-time web/app development after a period in technical program management roles that kept me close to systems, data, and software support work.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, HTML, CSS, SQL
Frameworks / Libraries	React, React Native (Hooks), Styled Components, Material UI
Tools & Platforms	Git/GitHub, Jira, Figma, REST APIs, CMS (Drupal, WordPress, Wix)
AI-Assisted Development	GitHub Copilot, Claude/ChatGPT for code generation, debugging, and documentation
Practices	Agile/Scrum, QA testing, Code review, Technical documentation

PROFESSIONAL EXPERIENCE

Grants & Contracts Manager

Jan 2025 – Oct 2025

University of Pittsburgh, McGowan Institute for Regenerative Medicine — Pittsburgh, PA

- Worked in Oracle-based financial systems, troubleshooting application errors and financial discrepancies across research and finance workflows.
- Translated complex technical/financial data into clear documentation for researchers and administrators — the same translation work developers do for clients and business analysts.
- Authored detailed proposals and compliance reports, sharpening technical writing skills.
- Coordinated cross-functional collaboration across research and finance departments using Teams and Outlook.

Consultant

Feb 2024 – Dec 2024

Beauregard Community Action Association, Inc. — DeRidder, LA

- Used REST API requests to fetch and integrate data into organizational systems.
- Managed and maintained website content and third-party resource listings, improving user experience.
- Provided technical support and software troubleshooting for staff.
- Administered client records and databases, aligning funding proposals with program needs.

Software Engineer

Aug 2021 – Nov 2022

Swimply — Los Angeles, CA

- Developed features and resolved bugs across web (React) and native mobile (React Native) platforms using TypeScript, JavaScript, and Hooks.
- Built functional components styled with Styled Components and Material UI, implementing new features and pages from Figma design specs.
- Integrated Segment data tracking to inform product decisions with real user data.
- Conducted QA testing and reviewed, committed, and approved pull requests via Git/GitHub.
- Participated in an agile workflow — daily stand-ups, sprints, retrospectives — prioritizing and completing Jira tickets.

Freelance Contractor

Jul 2020 – Oct 2020

PainScored — Lafayette, LA

- Deconstructed and adapted the Ignite CLI (React Native) boilerplate, authentication screens, and project structure.
- Streamlined authentication processes and adapted project frameworks for improved efficiency.
- Collaborated on design mockups and UI layouts; implemented navigation and mapping features.
- Tested across multiple platforms to verify functionality and performance.

Web Coordinator

Jul 2016 – Aug 2020

University of Louisiana at Lafayette, Office of STEP Support — Lafayette, LA

- Built and formatted pages using CMS platforms (Drupal 7), aligning designs with university style guidelines.
- Maintained the inventory database and produced/edited training videos in Adobe Premiere.
- Managed digital marketing campaigns to promote campus technology programs.
- Tracked university grants and software procurement records in Excel, ensuring data accuracy and budget transparency.

EDUCATION

B.S. in Computer Informatics — University of Louisiana at Lafayette, May 2020

B.A. in Communication — University of Louisiana at Lafayette, Dec 2018

RELEVANT PROJECT

- Medicare Fraud Detection (Team Project): Built a Python script to extract data from CSV files and generate fraud predictions using a random-forest algorithm; stored results in PostgreSQL and built a Tableau UI mockup/presentation. Ran the project under Agile methodology with Jira for ticket tracking.
